Intramuscular Injection Simulator

AR18

AR18/50

The Intramuscular Injection Simulator provides realistic, repeatable training for intramuscular injections. Ideal for practising vaccination and patient communication, it features a high-quality silicone pad that mimics real tissue. The self-sealing material allows multiple needle insertions and fluid injections, delivering lifelike feedback and long-lasting use.

Skills

- Intramuscular injection
- Patient communication
- Administering of fluid injections e.g. vaccination

Features

- Simple to set up and use
- The injection pad is moulded from a specially selected grade of silicone to improve feel and durability
- The injection pad has self sealing characteristics that can be penetrated many times, enhancing durability
- Accepts fluid injections

Includes

Injection Pad
Desktop Holder
Instruction Manual
